

# Assignment 4

## Database Normalization

**Table 1: Organizer**

Organiser	
PK	<u>organiser_id</u> int NOT NULL
	first_name varchar
	last_name varchar
	email varchar
	contact_number int

### **1<sup>st</sup> Normal Form:**

- It has primary key organiser\_id with minimal attributes.
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The organizer table is in 1<sup>st</sup> Normal Form.

### **2<sup>nd</sup> Normal Form:**

- It is in 1<sup>st</sup> Normal form
- All non-key attributes are fully dependent on Primary key Organiser\_id.

The Organizer table is in 2<sup>nd</sup> Normal form.

### **3<sup>rd</sup> Normal Form:**

- It is in the 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The Organizer is in 3<sup>rd</sup> Normal form.

Therefore, the organizer table is **Normalized**.

### **After Normalization:**

Organiser	
PK	<u>organiser_id</u> int NOT NULL
	first_name varchar
	last_name varchar
	email varchar
	contact_number int
FK	club_id int

×

**Table 2: User**

User	
PK	twitter_handle varchar
	name varchar
	follower_count int
	following_count int
	Join_date Date

### 1<sup>st</sup> Normal Form:

- It has primary key twitter\_handle with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The user table is in 1<sup>st</sup> Normal Form.

### 2<sup>nd</sup> Normal Form:

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key twitter\_handle.

The user table is in 2<sup>nd</sup> Normal form.

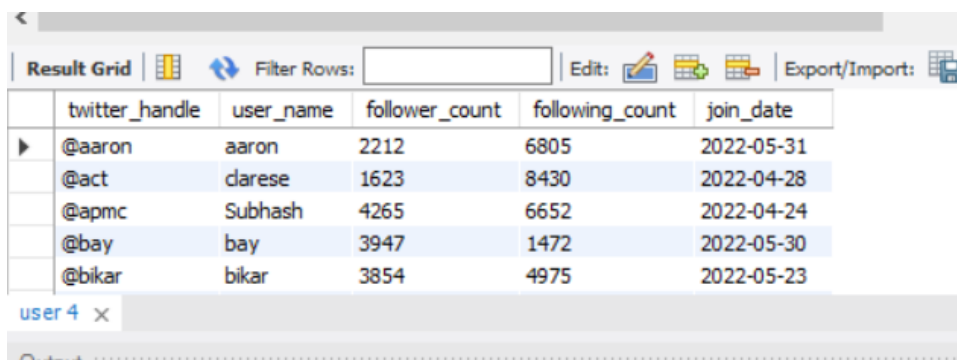

### **3<sup>rd</sup> Normal Form:**

- It is in the 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The user table is in the 3<sup>rd</sup> Normal form.

Therefore, the user table is **Normalized**.

### **After Normalization:**

	twitter_handle	user_name	follower_count	following_count	join_date
▶	@aaron	aaron	2212	6805	2022-05-31
	@act	clarese	1623	8430	2022-04-28
	@apmc	Subhash	4265	6652	2022-04-24
	@bay	bay	3947	1472	2022-05-30
	@bikar	bikar	3854	4975	2022-05-23

### **Table 3: Clubs**

Clubs	
PK	<u>club_id int NOT NULL</u>
	club_name varchar
	club_contact int
	club_email varchar
	club_location varchar
FK	Twitter_handle varchar
FK	Organiser_id int

### **1<sup>st</sup> Normal Form:**

- It has primary key club\_id with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups

The club's table is in 1<sup>st</sup> Normal form.

### 2<sup>nd</sup> Normal Form:

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key club\_id.

The club's table is in 2<sup>nd</sup> Normal form.

### 3<sup>rd</sup> Normal Form:

- It is in 2<sup>nd</sup> Normal Form.
- It has transitive dependencies.

It is not in 3<sup>rd</sup> Normal form because twitter handle and organiser\_id depend on each other.

To normalize, the table is divided into two more tables, that is **Clubs** and **ClubUsers** tables.

Clubs				
PK	<u>club_id int NOT NULL</u>			
	club_name varchar			
	club_contact int			
*	club_email varchar	*		
	club_location varchar			

ClubUsers				
PK	<u>Cu_id int NOT NULL</u>			
FK	twitter_handle varchar			
FK	club_id int			

The club's table is in 3<sup>rd</sup> Normal form.

Therefore, the clubs table is **Normalized**.

### After Normalization:

Clubs				
PK	<u>club_id int NOT NULL</u>			
	club_name varchar			
	club_contact int			
*	club_email varchar	*		
	club_location varchar			

club_id	club_name	club_contact	club_email	club_location
3435	Aspiring Products Managers club	9528734606	apmcatneu@gmail.com	Northeastern
3436	Graduate Student Government	9421776385	gsg@northeastern.edu	Northeastern
3437	Northeastern university Huskies and outing club	9645151064	nuhoc.info@gmail.com	Northeastern
3438	Sanskriti	9277131497	nu.sanskriti@gmail.com	Northeastern
3439	Art and creative Therapy	9939787302	artcreativetherapy@northeastern.edu	Northeastern
3440	Chinese markets club	9575396435	cmc.neu@gmail.com	Northeastern
3441	Fintech Initiative	9034931551	nufintech@gmail.com	Northeastern
3442	Game studio club	9154789222	gamestudioclub@northeastern.edu	Northeastern
3443	Health Humanities club	9187185734	hhc@northeastern.edu	Northeastern

**Table 4: ClubUsers table**

ClubUsers	
PK	<u>Cu_id int NOT NULL</u>
FK	twitter_handle varchar
FK	club_id int

### 1<sup>st</sup> Normal Form:

- It has primary key cu\_id with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The ClubUsers table is in 1<sup>st</sup> Normal Form.

### 2<sup>nd</sup> Normal Form:

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key cu\_id.

The ClubUsers table is in 2<sup>nd</sup> Normal form.

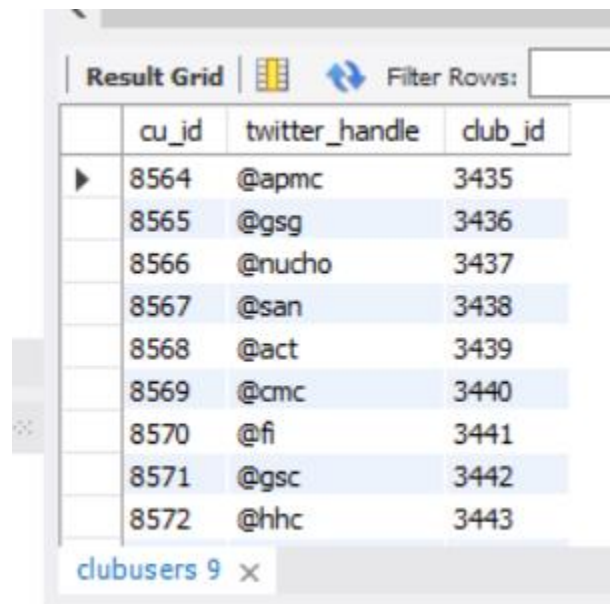

### 3<sup>rd</sup> Normal Form:

- It is in 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The ClubUsers table is in 3<sup>rd</sup> Normal form.

Therefore, the ClubUsers table is **Normalized**.

### After Normalization:

The screenshot shows a database query result grid with the following data:

	cu_id	twitter_handle	club_id
▶	8564	@apmc	3435
	8565	@gsg	3436

	8572	@hhc	3443

clubusers 9 x

**Table 5: Events**

Events	
PK	<u>event_id int NOT NULL</u>
	event_title varchar
FK	location_id int
	event_date date
	event_time time
	event_duration int
	event_price int
FK	event_type_id int
	event_theme varchar
FK	status_id int
	event_perks varchar
FK	Club_id int

### 1<sup>st</sup> Normal Form:

- It has primary key event\_id with minimal attributes

- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The Events table is in 1<sup>st</sup> Normal Form.

## 2<sup>nd</sup> Normal Form:

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key event\_id.

The Events table is in 2<sup>nd</sup> Normal form.

## 3<sup>rd</sup> Normal Form:

- It is in 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The Events table is in 3<sup>rd</sup> Normal form.

Therefore, the Events table is **Normalized**.

## After Normalization:

**Table 6: Event Status**

Event_Status	
* PK	<u>status_id int NOT NULL</u>
	Event_status

## 1<sup>st</sup> Normal Form:

- It has primary key status id with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).

- There are no repeating groups.

The Event\_status table is in 1<sup>st</sup> Normal Form.

## 2<sup>nd</sup> Normal Form:

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key status id.

The Event\_status table is in 2<sup>nd</sup> Normal form.

## 3<sup>rd</sup> Normal Form:

- It is in 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The Event\_status table is in 3<sup>rd</sup> Normal form.

Therefore, the Event\_status table is **Normalized**.

## After Normalization:

Result Grid			Filter Rows:
	status_id	Event_status	
▶	S5656	Completed	
	S5657	Upcoming	
	S5658	Completed	
	S5659	Completed	

**Table 7: Admin account**

Admin Account	
twitter_handle	varchar
password	varchar

## 1<sup>st</sup> Normal Form:

- It has no primary key

The admin account table is not in 1<sup>st</sup> Normal Form.

To remove the redundancy, the table is removed and incorporated into **the User** table.

**Table 8: Payments**

Payments	
PK	<u>payments_id</u> int NOT NULL
	paid_on DateTime
	total_amount varchar
	payment_details varchar
FK	event_id int
FK	twitter_handle varchar

**1<sup>st</sup> Normal Form:**

- It has primary key payment\_id with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The Payments table is in 1<sup>st</sup> Normal Form.

**2<sup>nd</sup> Normal Form:**

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key payment\_id.

The Payments table is in 2<sup>nd</sup> Normal form.

**3<sup>rd</sup> Normal Form:**

- It is in 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The Payments table is in 3<sup>rd</sup> Normal form.

Therefore, the Payments table is **Normalized**.

**After Normalization:**

payments_id	paid_on	total_amount	payment_details	twitter_handle	event_id

45663	2022-09-08 00:00:00	15	Payment Received.Ticket should collected at th...	@gsc	89805
45664	2022-09-09 00:00:00	35	Payment Received.Ticket is generated online	@hhc	89806

**Table 9: location**

Location	
* PK	<u>location_id</u> int NOT NULL
	street varchar
	city varchar
	state varchar
	country varchar
	postal_code int

### 1<sup>st</sup> Normal Form:

- It has primary key location\_id with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The Location table is in 1<sup>st</sup> Normal Form.

### 2<sup>nd</sup> Normal Form:

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key location\_id.

The Location table is in 2<sup>nd</sup> Normal form.

### 3<sup>rd</sup> Normal Form:

- It is in 2<sup>nd</sup> Normal Form.
- It has transitive dependencies.

The Location table is not in 3<sup>rd</sup> Normal form because postal code and city depend on each other.

Hence, the table is divided into two more tables **location** and **Postal code**.

Location	
PK	<u>location_id</u> int NOT NULL
	street varchar
	city varchar
	state varchar
	country varchar
FK	postal_code int

Postal_code	
PK	<u>Postal_code</u> int NOT NULL
	city

Now, the location table is in 3<sup>rd</sup> Normal Form.

Therefore, the location table is **Normalized**.

### After Normalization:

Location	
PK	<u>location_id</u> int NOT NULL
	street varchar
	state varchar
	country varchar
FK	postal_code int

Result Grid					
	location_id	street	state	country	PostalCode

	L4574	East village	MA	US	2122
	L4575	340 curry	MA	US	2123

**Table 10: Postal code**

Postal_code	
PK	<u>Postal_code</u> int NOT NULL
	city

**1<sup>st</sup> Normal Form:**

- It has primary key postal code with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The Postal code table is in 1<sup>st</sup> Normal Form.

**2<sup>nd</sup> Normal Form:**

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key postal code.

The Postal code table is in 2<sup>nd</sup> Normal form.

**3<sup>rd</sup> Normal Form:**

- It is in 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The Postal code table is in 3<sup>rd</sup> Normal form.

Therefore, the Postal code table is **Normalized**.

**After Normalization:**

	Postalcode	city
▶	2115	Boston
	2116	Boston
	2117	Boston
	2118	Boston
	2119	Boston

**Table 11: Tweets**

Tweets	
PK	<u>tweet_id</u> int NOT NULL
FK	twitter_handle varchar
	tweet_text varchar
	created_at DateTime
	hashtags varchar

**1<sup>st</sup> Normal Form:**

- It has primary key tweet\_Id with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The tweets table is in 1<sup>st</sup> Normal Form.

**2<sup>nd</sup> Normal Form:**

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key tweet\_id.

The tweets table is in 2<sup>nd</sup> Normal form.

**3<sup>rd</sup> Normal Form:**

- It is in 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The tweets table is in 3<sup>rd</sup> Normal form.

Therefore, the tweets table is **Normalized**.

**After Normalization:**

**Table 12: Event type**

Event Type	
PK	<u>event_type_id</u> int NOT NULL
	event_type_name varchar

### **1<sup>st</sup> Normal Form:**

- It has primary key event\_type\_id with minimal attributes
- The values in each column of a table are atomic (No multi-value attributes are present).
- There are no repeating groups.

The Event type table is in 1<sup>st</sup> Normal Form.

### **2<sup>nd</sup> Normal Form:**

- It is in 1<sup>st</sup> Normal form.
- All non-key attributes are fully dependent on Primary key event\_type\_id.

The Event type table is in 2<sup>nd</sup> Normal form.

### **3<sup>rd</sup> Normal Form:**

- It is in 2<sup>nd</sup> Normal Form.
- It has no transitive dependencies.

The Event type table is in 3<sup>rd</sup> Normal form.

Therefore, the event type table is **Normalized**.

### **After Normalization:**
